

VIDEO RECORDING AND REPRODUCING APPARATUS

5

ABSTRACT OF THE DISCLOSURE

10 A video recording and reproducing apparatus for
simultaneously displaying a plurality of image contents
recorded at given time points or images at a plurality of
given portions within the same image contents is
disclosed. A plurality of images read from a randomly
accessible data storage unit for storing the images
recorded by an image recording unit are synthesized into
15 a single screen by an image synthesizer. An information
processing unit reads from the image recording unit a
plurality of image contents recorded at different time
points or a group of images recorded at a plurality of
different time points in a given one image content and
20 causes the image synthesizer to display, by synthesizing
the image contents or the images, as the case may be, on
a single screen.
